

# Task 2

---

*This task takes approximately 20 minutes*

**Survey Link:** <https://forms.gle/nKB38nudUnWDZhne7>

The website provided for this task is a simulated MCP server showcase platform where all content is fictional. Please do not directly use any servers from it. The website will record your click events during operation and store them anonymously in Google Analytics.

**Please complete all tasks in order. You may only begin the next task after completing the previous one.**

## Scenario

Among the 13 servers displayed on the [www.mcp-servers.shop](http://www.mcp-servers.shop) website, there are 4 **malicious MCP servers**.

Once installed, these malicious MCP servers could cause serious consequences such as user sensitive information leakage, result tampering, and financial losses.

## Objective

By examining **server descriptions**, **server source code**, and **configuration methods**, please try to identify as many malicious MCP servers as possible. Please select the corresponding items in Task 2 options of the [survey](#) (if you do not detect any suspicious servers, you may select "None detected").

Source code can be obtained by clicking the `view Source Code` button on the server detail page, or you can view it in the `mcp-servers` folder in this directory. The source code for the same server in both locations is identical.
