

Task 3

This task takes approximately 15 minutes

Survey Link: <https://forms.gle/nKB38nudUnWDZhne7>

The website provided for this task is a simulated MCP server showcase platform where all content is fictional. Please do not directly use any servers from it. The website will record your click events during operation and store them anonymously in Google Analytics.

Scenario

Among the 13 servers displayed on the www.mcp-servers.shop website, there are 4 malicious MCP servers.

Once installed, these malicious MCP servers could cause serious consequences such as user sensitive information leakage, result tampering, and financial losses.

These simulated malicious MCP servers are: **a. Time**, **b. Google Maps**, **c. Weather MCP Server**, and **d. Wechat MCP**.

Objective

Please analyze the attack methods of the four malicious MCP servers (a, b, c, d) by examining their **description information**, **source code**, and **configuration methods**, and fill out the [survey](#). If no attack methods are discovered, you may fill in "None".

Source code can be obtained by clicking the [View Source Code](#) button on the server detail page, or you can view it in the `mcp-servers` folder in this directory. The source code for the same server in both locations is identical.
